

Fitting the M1-ATX DC DC power supply to a Compaq EN SFF P3 450Mhz PC

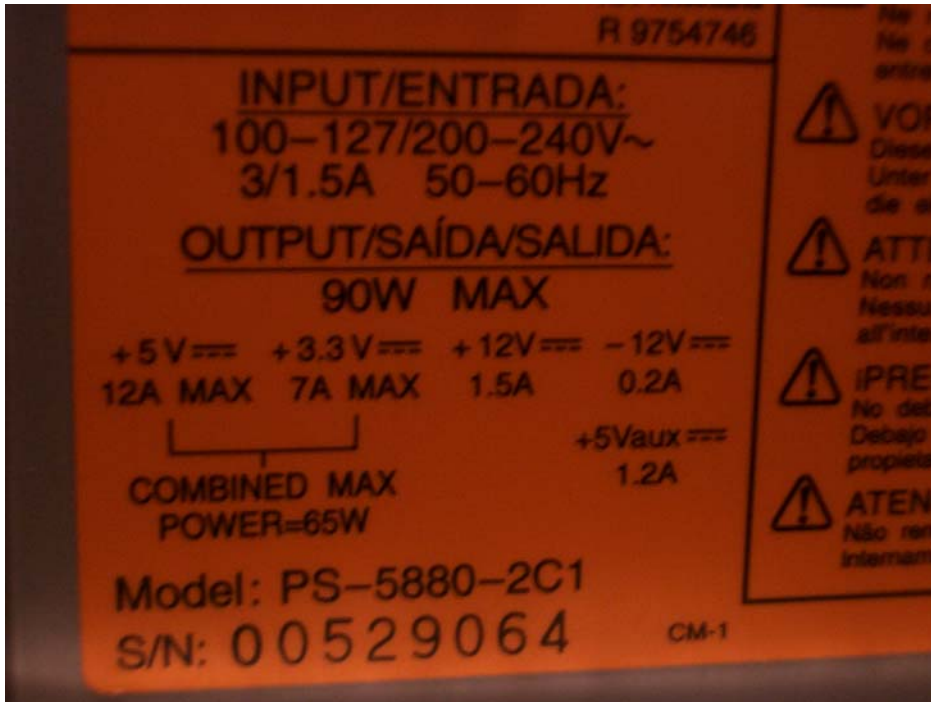

M1-ATX mounted within the original Compaq PSU once PCB had been removed. Note the wires to the original PSU 14 way connector was left long to enable soldering to M1's ATX connector. Within the yellow insulation tape is the TL192 opto couple required to invert the PS_On signal.

This picture shows the original PSU connector.

Compaq Motherboard showing PSU connector. On the EN SFF model of PC the PSU is hinged from the left and swings down onto the motherboard to connect.

Fitting the M1-ATX DC DC power supply to a Compaq EN SFF P3 450Mhz PC

Picture showing original PSU specification. Note how closely this matches the M1-ATX. making the M1 a very good choice.
